

Blue Cube Systems is proud to announce the full roll out of the “Sample Optimiser” system in Australia to be used in conjunction with our sampling cabinet for the MQi Slurry Analysers.

The systems is designed to allow for calibration samples to be taken at the optimal time by utilising the analysers information as well as available flow and density details. The sample cabinet includes an accurate scale to record & report bucket tare and sample mass automatically.

The new Sample Optimiser is designed to improve the calibration accuracy as well as reduce the time and resources required for sample collection on site.
